
Technology Board Report

August 2020

Completed/working on Summer Projects:

- Gathering data for student who do not have internet. We will be passing out MiFi s to families that need them.
- In the process of handing out all devices throughout the district. So far, Winn's iPads are the only device not in.
- Added a couple of new software programs to the district inventory to help teachers with remote teaching. CatchOn which allows us to monitor what students are working on from home and how much engagement is occurring (engagement = how many times they log on. This will help teachers help students before they get too far behind. Screencastify is the second software. It allows teachers to record and annotate their screen, internet tab or themselves.
