

With the weather break we are in process of the electrical install at the new modular at High School. We will be building ramps and steps during spring break. The mowers and lawn equipment have been serviced and ready for summer use. The sports fields are fertilized and sprayed for weed control. Two unit ventilators saved from the Cartmell renovation have been installed in the front office and principles office in the Area Technology Center. This install has eliminated two individual units that ran on electric and added them to the boiler/ chiller loop which is more efficient with the new system installed last year. This will make a small dent in power usage but still a step in energy conservation. The softball score board had some control issues; a cut wire was located in the area behind the field and addressed to rectify the problem. We strive for constant improvement throughout the district.
